

Construction of upgrades and improvements to the Borough of National Park’s Water Treatment Plan were financed by the New Jersey Environmental Infrastructure Financing Program (NJEIFP). The NJEIFP is a State Revolving Fund program jointly administered by the New Jersey Department of Environmental Protection (DEP) and the New Jersey Environmental Infrastructure Trust (Trust) and uses a combination of funds provided by the United States Environmental Protection Agency, the DEP, and the Trust to provide very low interest loans to borrowers for environmental infrastructure projects.

This project will provide water quality benefits by replacing the Borough’s two potable water supply wells. Existing wells 5 & 6 are approximately fifty years old and have reached the end of their useful life. New wells 7 & 8 are being drilled to replace the existing wells. These wells and the Borough’s water treatment plant provide drinking water for residents and businesses in the Borough of National Park.

State Revolving Fund programs around the nation provide states and communities the resources necessary to maintain and improve the infrastructure protecting our valuable water resources nationwide.
